TO WHOM SO EVER IT MAY CONCERN

National Institute of Homoeopathy, Kolkata is the premier autonomous Institute under the Ministry of AYUSH, Govt, of India in the field of Homeopathic learning, training, research and patient care of the country. NIH, is a benchmark brand in teaching and training of Homoeopathy not only in India but globally. This Institute has pioneered many path breaking activities in Homeopathy and all colleges and Institutes look forward to NIH as leader in Homeopathic Education, Research and Training. It has remained the torch bearer of improvement and innovation in Homoeopathic Education giving scientific fillip while keeping the classical texture of Homoeopathy intact.

I have visited NIH several times in various capacities like statutory inspector of the Govt, of India, resource person, examiner, teaching experts in interviews, etc. During these visits I have minutely observed the philosophies, functioning and activities of the Institute and found them to be quite impressive. I have also closely interacted with the Officials and the faculties of the Institute often to notice the wonderful vision-oriented teamwork of the institute. I personally always found model NIH worth emulating.

The Institution has been delivering academic excellence from the time of its inception as can be inferred from the signing luminaries National Institute of Homoeopathy has produced in the field of Homoeopathy. To its credit NIH has produced revered Vice chancellors, able administrators, excellent faculties, sought-after clinicians, leading researchers, successful entrepreneurs, etc. who are and have been serving the humanity.

The ancient nature of homoeopathy and contemporary research validation process needs a delicate balance so that global acceptance of homoeopathy is enhanced, though the original scientific principle is also not compromised. I feel, NIH has achieved the objective with a fair degree of success. NIH has been successfully preserving and enhancing the cultural heritage and traditional knowledge strength of India.

Any science needs to remain time relevant and this requires innovations in its research, education and training. NIH has successfully integrating innovations in its pursuits to keep its man and methods highly useful in contemporary era. This Institute adds more in its teaching and training both in terms of content and methodology, to the conventional degree curriculum (BHMS, M.D. (Hom), Ph.D.) so that its students acquire more than the rest. At the same time NIH develops and imparts many short-term informal courses for various sections of the interested learners of Homeopathy which has enhanced the awareness and practice of Homeopathy significantly.

It is my observation that NIH with many rational ideas in Homoeopathy education effective increase in awareness and practice of homeopathy for the betterment of the health of humanity and contribute to the strategic requirement of the country by minimizing the health budget of the country through

prevention-preservation-promotion of health. But, owing to the fact that NIH belong to the conventional University affiliation system and lacks academic autonomy it has not been able to perform to its true potential in the field of Homeopathic Education Training. If NIH is granted academic autonomy, I am confident it will be able to achieve much more than present in the terms of achieving cultural heritage and Indian knowledge system. Such autonomy will also pave the path for NIH to effectively and more meaningfully contribute to the strategic need of the country by improving the health status of the population.

Hence, I recommend NIH may be granted Deemed to be University status under De-Novo category.
